

MarineTrac®

Boat & Watercraft Tracking

MarineTrac is a robust, affordable tracking and security system that provides information about a craft whether it is in storage on land or docked. Easy to use and install, the device is housed in a waterproof case and includes a one-month back-up battery.

No need to worry about getting lost, especially on the water and out of sight of land. You'll be able to accurately locate your position and plot a course to safety. The Guard Dog GPS engineers who developed MarineTrac are boat owners themselves and they included features they want to use.

SPEED ALERTS AND FUEL SAVINGS

Set speed limits from your mobile device where you think the safety of a driver might be compromised. If a driver exceeds the set speed limit, an alert is immediately sent to you. Save on fuel costs by monitoring speed and excessive engine idling. Statistics show for every MPH over 55, fuel consumption increases 1.5 percent. **All Guard Dog GPS trackers have this feature.**

AIRTIME PLANS

All **Guard Dog GPS** devices require airtime plans and activation. Plans are for unlimited phone and Web use.

| PLANS | AutoTrac® MotoTrac® MarineTrac® | FleetTrac® |
|----------------------|---------------------------------------|---------------|
| Annual Airtime Plan | \$148/year | \$168/year |
| Monthly Airtime Plan | \$14.95/month | \$16.95/month |

SUPERIOR GPS TRACKING

*Smart,
Reliable,
Easy to Install*

SUPERIOR GPS TRACKING

Inexpensive, practical and technically advanced, Guard Dog GPS devices are specifically designed for the highest performance in each vehicle category.

Information and alerts are transmitted to desktop computers and mobile devices in real time. Manufactured in the United States, FleetTrac utilizes proprietary firmware that is constantly updated free over the air. All tracking reports and notices are downloaded in real time to mobile devices or computers.

AutoTrac®

Automobile Tracking

AutoTrac monitors the location and status of your vehicle 24/7. Tracking alerts and reports are downloaded to your mobile device or computer in real time – so you can always rest assured that your vehicle is secure wherever it is.

Driving is a privilege. Parents rely on AutoTrac to reward good driving and use reports and alerts to modify dangerous driving. The Guard Dog GPS AutoTrac virtual fence defines where the car can be driven. The device reports location, speed, direction, even full addresses where a vehicle stops along its route. It's like being right in the car.

VIRTUAL FENCE

Set a virtual area where you want a vehicle or craft to operate. If the vehicle passes the boundary, an alert is immediately sent to your phone or e-mail. Ideal to know where delivery employees and teens are at all times. **All Guard Dog GPS trackers have this feature.**

FleetTrac®

Commercial Fleet Tracking

FleetTrac is the leading inexpensive, high-quality, multi-functional tracking and security system available today. Delivery fleets, cabs and limo companies and even construction equipment will benefit from the data-gathering capabilities of these superior devices.

Fleet owners will have the ability to track the exact location of every vehicle in their fleet in real-time. Businesses will be able to considerably lower costs, reduce fuel consumption, improve employee productivity, and expand the security and life of your vehicles and more.

- **Real-Time Tracking** and reporting.
- Movement and accident alerts.
- **Virtual fence.**
- **Bread Crumbing (6 months of historical data).**
- Address, engine idling, engine on/off at all locations.
- **Speed Alerts.**
- Ignition status alerts.
- Integrated back up battery.
- Battery monitoring, low-voltage/low amperage alert.
- **Mileage usage.**
- **No contracts or penalties for early airtime termination.**
- **Online activation.**
- \$1 million product liability insurance.
- Optional engine disable.
- 2 year warranty.

MotoTrac®

Motorcycle Tracking

Guard Dog MotoTrac delivers the ultimate in security for motorcycles. Although manufacturers include a security system with the bikes they sell, they lack the benefits of this robust tracking and security system. MotoTrac is a reliable, functional, and efficient real-time system to optimize the safety and security of your bike.

Set MotoTrack's virtual fence to create a safe zone around the bike when it is parked. As soon as it is moved, an alert is sent to your mobile device. Then use your mobile device or computer to trace and report the movement of the bike for quick recovery.
